EPA honours Marathon Petroleum for sustained excellence in ENERGY STAR® programme

Energy efficiency and environmental compliance once again have put Marathon Petroleum Corporation (MPC) in a select group of US companies. MPC earned its fourth consecutive ENERGY STAR® Partner of the Year – Sustained Excellence Award, the highest level of recognition in the US Environmental Protection Agency’s (EPA) ENERGY STAR programme. MPC is one of only two companies in the petroleum refining industry to receive the Sustained Excellence Award this year.

EPA chooses Sustained Excellence Award winners at its discretion. Winning companies must go above and beyond the criteria for Partner of the Year recognition by showing continuous improvement over time in organisation-wide energy savings and environmental performance, demonstrating best practices and actively promoting the ENERGY STAR programme.

“As we accelerate historic efforts to address climate change, public-private partnerships will be essential to realising the scale of our ambition,” said EPA Administrator Michael S. Regan. “I applaud this year’s ENERGY STAR award winners for working with EPA to deliver a clean energy future that saves American consumers and businesses money and creates jobs.”

MPC’s award reflects company achievements in 2022, including:

- The refining organisation’s Focus on Energy programme reduced energy consumption by about 20 billion Btu per day from baseline levels. This reduction amounts to conserving 14 tanker trucks of gasoline every day and avoiding 31,700 metric tonnes of carbon dioxide-equivalent emissions per month.
- Six refineries (Anacortes, Washington; Canton, Ohio; Detroit, Michigan; Garyville, Louisiana; Robinson, Illinois; St. Paul Park, Minnesota) received 2022 ENERGY STAR certifications for energy efficiency performance in the top 25 percent of similar facilities nationwide. This was a record for the most certified refineries from a single petroleum refining company in one year.
- Four terminals (Cincinnati, Ohio; Jackson, Michigan; Lansing, Michigan; Muncie, Indiana) in MPC’s midstream company, MPLX, achieved the ENERGY STAR Challenge

for Industry in 2022 by reducing their energy intensity at least 10 percent within a five-year period.

- A joint venture partnership with Neste was finalised to progress conversion of MPC's Martinez, California, refinery into a renewable fuels facility. It joins the company's fully operational Dickinson, North Dakota, renewable diesel facility, which is the second largest facility of its kind in the US with a production capacity of approximately 184 million gallons per year.

MPC received the ENERGY STAR Partner of the Year Award in 2018 and 2019 before earning the company's first Sustained Excellence Award in 2020. For a complete list of 2023 award winners and more information about the ENERGY STAR awards programme, visit energystar.gov/awardwinners
