Stanlow Terminals have recently awarded Cammell Laird a £2 million contract

In the dynamic landscape of maritime logistics, the synergy between companies can often be the catalyst for innovation and growth. This is exemplified by their collaboration with the local ship building business, Cammell Laird.

The journey with Cammell Laird began in 2022 with the fabrication of a single Marine Mooring Dolphin, which proved to be a successful venture. Building on this success, Stanlow Terminals have recently awarded Cammell Laird a £2 million contract to procure two additional Marine Mooring Dolphins.

These new structures, which will float at a height of 3 metres (2 metres below the water level) and have a width of 7.5 metres, will play a vital role in their Tranmere mooring configuration. Weighing a substantial 75 metric tonnes, they will provide stability for tankers during berthing, enabling them to navigate with ease as the tide flows.

What truly sets this collaboration apart is not only the technical expertise brought by Cammell Laird, but also their joint commitment to the local community and workforce development. Cammell Laird has recently taken on nearly 150 apprentices across various disciplines, ranging from fabrication and engineering to human resources.

In line with their continued dedication to employing apprentices, a portion of Cammell Laird's apprentices will actively contribute to the Marine Mooring Dolphin project. This dual commitment to project excellence and the development of the next generation of industry professionals reflects their forward-thinking approach to the future of the industry.

As the Marine Dolphin project progresses, they hope that their partnership with Cammell Laird will demonstrate how close collaboration with local businesses can lead to not only technological innovation, but also the cultivation of a skilled workforce and a thriving local economy.
